CLEARLEAF'S SAFE AGRICULTURE PRODUCT GOTA BLANCA® CLEARED FOR ORGANIC AGRICULTURAL USE.

For Immediate Release

SAN JOSÉ, COSTA RICA, NOVEMBER, 10, 2020

ClearLeaf S.A.'s flagship GotaBlanca® product, designed to protect crops from pathogens without harming human health or the environment, has obtained its certificate of conformity to Europe Union Organic Standard (CE N°889/2008), Japanese Organic Standard (JAS/MAFF), and Costa Rica Organic Standard (MAG 29782).

After years of multi-disciplinary R&D, drawing on cutting-edge biotech, surface chemistry, and medical, agricultural, and polymer sciences, this recognition of ClearLeaf's sustainable solution of non-toxic contact-action liquid emulsions to control fungal and bacterial pests opens new perspectives for both conventional and organic agriculture worldwide.

"Pest management must be done better: toxic systemic products fail to control sustainably ever-adaptive pests and can result in health problems for farmers and consumers alike, while harming our eco-system. Our GotaBlanca® line of products meets the performance characteristics required by small, medium and large-scale agricultural producers, at a time when very few viable alternatives are reaching the market", says ClearLeaf's CEO Lawrence Pratt.

"This certification quickly raises GotaBlanca®'s visibility and status. There are no products on the market that are as effective and safe as GotaBlanca®, and our clearance for organic use under two of the worlds' most stringent certification systems will make organic production more viable for many farmers, and send a powerful signal to conventional producers that highly effective lower-impact products exist", explains further Néstor Zúñiga Arias, Managing Director.

Founded in 2017 in Costa Rica, ClearLeaf develops sustainable crop protection and improvement strategies that manage the impacts of harmful pests while maintaining natural balances on the farm, protecting farmers and consumers. GotaBlanca® technology, based on USFDA- approved medical technology, currently has pre and post-harvest solutions for coffee, banana, sugar cane, and flower sectors, and has ongoing pilots for pineapple, cannabis, citrus, grapes, and a variety of vegetables. ClearLeaf also has a new line of products for easier, safer, and more cost-effective in vitro propagation.
